

# CurrecAlert

A hyper real-time ForEx spread monitor

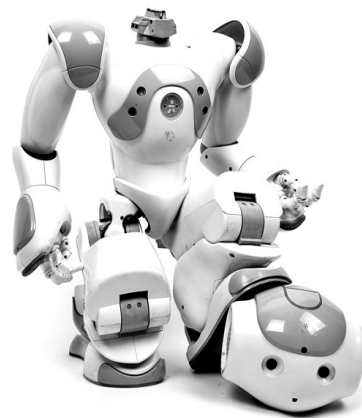

CurrecAlert is a rapid spread alert system for identifying real-time Forex trading opportunities in the 24-Hour market. The alert system is designed to conditionally monitor spread and inform high-frequency traders and trading companies. With spread tracker and real-time spread alerts, traders can capture pips, make instant data-driven decisions, and accomplish trading goals.

You have to know about this

## Alert System services

Our alert system automatically calculates the real-time spread every minute. After comparison to the latest spread in the stream processing, it updates you the lowest spread of the day. New lower spread triggers alert execution. Users can sign up to keep abreast of currency pair movement. CurrecAlert notified you via email!

## Spread tracker services

With data wrangling and time series analysis, CurrecAlert conditionally monitors major and exotic currency pairs' spread movements. Spread is visualized in the interval of 1 min, 5 mins or 30 mins. A variety of parameters are available to fine tune charts, including Bollinger bands, EMA, ROC and momentum indicators.
